

# Pre-Production Certification Report  
Project: MMD-Main 1.2  
Assessment Date: May 3, 2026  
Assessed By: Codex  
Decision: No-Go

#### Executive Summary

A pre-production certification was executed with evidence-backed checks across environment readiness, build gates, security posture, auth/RBAC controls, and operational controls. Current state is No-Go because mandatory production gates are not fully satisfied.

#### Primary blockers:

- Missing required runtime environment configuration (including DATABASE\_URL)
- Production build failure at route data collection stage
- Release gate failure (release:check)
- Unresolved moderate dependency vulnerabilities requiring remediation decision

#### Final Recommendation

Decision: No-Go

Production push should be held until P0/P1 blockers are closed. After remediation, rerun full certification and issue an updated release decision (Go or Go with Conditions) with fresh evidence.
